These are the planned features for 10/5/2018. Most of these should be done by then

1 Front-end

- Move the big box on the frontpage with the follower/following count to the account page

- Improve how the login and registration page look. Add a logout button

- Add the facebook button in a nice location

- Change the category selection page (The one you see when you log in for the first time) to allow more categories to be shown (When we have 50 categories, the current window will not look good)

- Improve the way a board is displayed in the boards page. Add buttons to update/delete a board. A board has to be clickable to redirect the user to the pins page for that board (The functionality for this is backend stuff)

- Add a way to change the settings of a board to private/public

- Improve the way a pin is displayed (title & image). Add buttons to update/delete a pin. A pin has to be clickable, which will redirect the user to a pin overview page with the entire recipe and extra details in it.

- Make a page for an entire recipe (entire pin) as described in the previous item

- Create the popup thing for notifications, messages, and activities

- Create a page to show search results (This is a simple page with the header and a collection of pins)

- Create a User page where a user can see his boards/pins/followers/following (See pinterest for inspiration)

- Create pages displaying followers and the people/boards you are following

- Add a block button to each follower you have

- Create a page for the explore feature. It should show the trending topics, rising topics and new topics

- Make the administrator pages look better. These are the page to create new topics and the page to create a new administrator

- Add a button to a user's profile page which allows an administrator to block this user. Also add a button to remove that user (Visibility of these buttons will be controlled by the backend so that only administrators can see the buttons)

- Add nice visualisations for the administrator statistics

2 Back-end

- Category selection when first loging in
- Implement messages
- Implement the search functionality for topics
- Implement the explore feature (trending topics and rising topics?)
- Add admin-specific statistics
- Retrieve user-specific pins to be displayed on the front page
- Image uploading for pins

3 Partially done (Waiting for linking to front-end

- Category selection when first loging in
- CRUD boards and pins (Things like privacy settings are not finished yet)
- Implement notifications
- Implement the search functionality for pins (topic search is front-end javascript selection because amount of topics is not that large so can be completely loaded to the frontend)
- Follow and unfollow boards and people
- Block followers
- Add functionalities for admins to block and remove users

4 Required features

- Admin user vs regular user
- Register/Login using our own functionalities
- Register/Login using facebook or google
- Provide at least 5 categories, for which a user has to select At Least 3 before being able to use the product
- CRUD Boards
- CRUD Pins and add pins to these boards

- Receive notifications/messages alerting to new posts from people you follow. Also notifications for new followers. Also notifications for friend activities

- Search P4X For sub topics and ideas

- Follow and unfollow boards and people

- Block followers

- Change privacy settings of a board

- Provide an explore feature with trending topics, rising and new topics, and content suggestion tailored for you (This last thing will be our front-page where a user will see random pins from boards he/she follows and topics she likes)

- Administrators can create new topics ???? (And add new content to the platform)????

- Administrators can add new administrators and both ???block???(What does this do exactly) and remove other users and administrators

- Administrators can see admin statistics, like number of registered users, how many are online, how many boards/pins are used, ...
